

## Talk:DNsmasq\_as\_DHCP\_server

Could someone fill out section 2, Using DNsmasq parameters, with a little more prose? The howto seems to be complete at the end of section 1, then there's this extra information, not sure what it means. (And I can't read German source material.)

I don't actually think that bit is needed any more. Certainly everything all the config I've needed (DNsmasq, DHCP Sscope
