

Hi.

Only is possible have a ipv6 conection with sixx tunnel broker? if i need another as freenet i must be install tpsc client and other things?

Thanks,

ChanGux

tunnel broker and the radvd prefix line

When using hurricane engine tunnel broker, I believe that the radvd.conf prefix line should be changed FROM:

```
...  
prefix 0:0:0:1::/64  
...
```

TO:

```
...  
prefix"2001:470:1f0f:5cd::/64" # change me  
...
```

where the address is same as MY_ROUTED_ADDR, being the "Routed /64" on the Tunnel Details page on HE's website

At least this seems to work for me. Thoughts?

Cheers!
